Battlecard: Nexus vs Taskforge | Nexus Sales Team

Last updated: October 2026. Owner: (unassigned)

Competitor Overview

Taskforge is a task-first project tool sold to small and midsize teams. It is strong on price and simplicity: a clean board, quick setup, and a loyal base among teams under 20 people. It added docs in 2025 and reports in 2026. Most Taskforge deals we see are teams that have outgrown it: the work has spread across boards, docs live elsewhere, and status reporting has become a manual Friday job.

How to Spot Them

- The prospect says "we mostly live in Taskforge, but docs are in a wiki and the roadmap is a spreadsheet."
- Boards are described as "fine," but reporting is "a Friday project."
- The team has just hired past 25 people, or a second team wants in.

Questions to Ask

- "When leadership asks where a launch stands, what do you open?"
- "Where does a decision made in a doc show up in the plan?"
- "How long does sprint or cycle reporting take, and who builds it?"

Landmines to Lay

- Ask what happens to a roadmap date when the underlying tasks slip. In Taskforge the roadmap is a drawing; in Nexus it is computed from the work.
- Ask who maintains their status deck, and what that hour costs every week.

Objection Handling

Objection	Response
"Taskforge is cheaper."	Compare totals, not stickers: their reporting tier and per-seat docs add-on close most of the gap, and the Friday status hour is a cost too.
"Our team likes Taskforge's simplicity."	Nexus starts from the same board. The difference appears when the second team, the docs, and the roadmap arrive.

Objection	Response
"Taskforge is adding roadmaps soon."	Their roadmap has been "coming" since the 2024 acquisition, and development has stalled since. Judge what you can buy today.

Pricing Snapshot

	Nexus	Taskforge
Starter	$0	$0
Pro	$12 per member per month, billed annually	$9 per member per month (per their 2024 pricing page)
Enterprise	Custom	Custom

Why We Win

- One workspace: tasks, docs, sprints, and roadmaps share projects and permissions, so status is a screen, not a meeting.
- Sprints run themselves in 2.0: rollover and cycle metrics computed from the board.
- Migration from Taskforge is an import, not a project: boards, tasks, and docs come over in one pass.

Freshness

Taskforge has no mobile app (checked March 2025), so field and travel use is browser-only on their side. Pricing above is from their 2024 pricing page.
