Nexus Sprints 2.0 - Messaging and Sales Pitch | Prepared by Tessa Grant

The Pitch

Nexus Sprints 2.0 is our biggest sprint release yet. It adds automatic cycle rollover, cycle metrics computed from the board, velocity trends across cycles, and a new sprint planning view. Sprints 2.0 makes Nexus the fastest way to run a sprint: set the cycle length once, and Nexus moves unfinished work forward, closes the cycle, and opens the next one with its metrics ready. No other project platform automates the whole cycle.

Key Messages

Audience	Message	Proof
Team leads running sprints	Your sprint runs itself between planning and retro	Automatic rollover and board-computed cycle metrics, new in 2.0
Product managers	The roadmap and the sprint finally agree	Roadmap items tied to the tasks that deliver them
Workspace admins	Nothing to configure per team	Cycle settings inherit from the workspace

The Story

Every week, a team lead somewhere loses an hour to sprint bookkeeping: closing the old cycle, carrying work over, rebuilding the same report. She did not become a lead to move tickets between columns. Then Nexus arrives with Sprints 2.0, rolls the cycle over on its own, computes the metrics from the board, and hands her the hour back, every week, forever. Her roadmap updates itself from the same work. The team just ships.

Objections We Hear

Objection	Response
"We already live in another tool."	Switching is easy. Most teams are up and running in a day.
"Our sprint process is custom."	Cycles are fully configurable: length, rollover rules, and which metrics are computed.
"Metrics from a board sound shallow."	

Objection	Response
	Cycle metrics come from the work itself (tasks completed, carried, added mid-cycle), not from estimates entered to please a report.

Proof

"It changed how our whole company works." (VP of Operations, Fortune 500 company)

Acme Product ran its Website launch in Nexus: 24 tasks, four members, one roadmap date, hit.

The Ask
